ANNOUNCEMENT

Scheduled Periodic Drinking Water Line Chlorine Flush

Starting Sunday, July 5, 2026

Ending Saturday, July 25, 2026

Maintaining high water quality in our drinking water system requires periodic line flushing and temporary treatment modifications. Our customers will notice more hydrant activity and a slight chlorine increase during the disinfection flush period (**July 5, 2026**, through **July 25, 2026**).

This is a temporary preventive maintenance causing no adverse health effects. Your house water is safe to drink.

During the flushing period, you may smell chlorine similar to levels found around swimming pools. If you are especially sensitive to the taste or odor of chlorine, keep an open container of drinking water on your counter for a few hours allowing the chlorine to dissipate.

Users of home dialysis machines, owners of tropical fish and managers of stores and restaurants with fish and shellfish holding tanks are advised to seek professional guidance for removing chlorine residuals from tap water.

More information about this temporary change can be reviewed by visiting pbcwater.com or calling Palm Beach County Water Utilities Department at (561) 740-4600. Please select Option #1 on your phone.
